Professional Summary

A detail-oriented data professional, leveraging a Master's degree in Information Systems and hands-on project experience to build data-driven solutions. Combines a strong academic foundation with practical experience in analyzing complex datasets to support strategic business objectives. A collaborative problem-solver, eager to help a team solve challenges and make smarter, more informed organizational decisions.

Education

Master of Science in Information Systems Northeastern University, Boston, USA	2022-24
Relevant Coursework: Database Design, Data Architectures for Business Intelligence, Advanced DBMS	GPA: 3.52/4.0
Bachelor of Technology in Information Technology SRM Institute of Science and Technology, Chennai, India	2016-20
Relevant Coursework: Database Management Systems, Python, Cloud Computing	GPA: 3.25/4.0

Experience

Data Analyst Rebecca Everlene Trust Company Chicago, USA (Remote)	Oct 2024 - May 2025
- Managed the data lifecycle for a grant prospecting database containing over 7,000 foundation records; tasks included data sourcing, cleansing, and validation to create a high-quality, centralized data source. - Executed data standardization and quality assurance across hundreds of records, correcting legacy data errors and performing schema matching to ensure relational consistency between new and existing datasets. - Developed a classification system to segment foundation records into 3 primary categories based on grant application deadlines (e.g., monthly, rolling, unresolved), which created an organized, time-sensitive workflow for the grant application team.	
Database Engineer Intern Steel Authority of India Limited Ranchi, India	Jun 2018 - Jul 2018
- Designed and developed a Library Management System to replace an inefficient, manual record-keeping process, utilizing a MySQL backend. - Designed and implemented a relational database schema to manage all book and member data, solving issues related to record searching and maintenance. - Engineered features to automate core library tasks, including member registration, book issuance, and report generation to improve the efficiency of the library staff.	

Projects

IMDB Movie Data Analysis Talend, E/R Studio, Alteryx, Tableau, MySQL, Azure SQL Databases	Dec 2023
- Engineered and orchestrated complex ETL pipelines in Talend to migrate data to Azure SQL Database, implementing SCD Type 2 methodologies to track historical data changes and create a high-integrity, centralized source of truth for scalable analytics. - Designed a dimensional data model in E/R Studio and optimized the dataset by removing over 20% of redundant columns, resulting in a more efficient data warehouse that improved query performance and the reliability of analytical results. - Delivered a self-service analytics solution using Tableau, empowering business users to independently explore data on genre performance and movie ratings to derive actionable insights.	
California Food Inspection Analysis Talend, E/R Studio, Alteryx, Tableau, MySQL, Azure SQL Databases	Nov 2023
- Audited and profiled food inspection data using Alteryx to identify inconsistencies. Optimized the dataset for BI requirements by removing over 15% of irrelevant or erroneous columns, significantly increasing the reliability of the final analysis. - Engineered robust ETL pipelines in Talend to process and migrate the cleansed data into a dimensional data warehouse in Azure SQL Database, ensuring high data integrity and consistency. - Designed and deployed a comprehensive BI dashboard in Tableau that visualized inspection trends and violation patterns, providing a tool to support public health oversight and data-driven decision-making.	
Movie Reservation System Analysis ArangoDB, Python, Tableau	Apr 2023
- Engineered a NoSQL database in ArangoDB, designing a document model with five collections to structure storage for a movie ticket reservation system. - Developed a Python-based ETL process to handle the ingestion and preprocessing of the source data, ensuring data consistency for analysis. - Extracted insights on customer behavior and movie performance by creating Tableau visualizations to enable data-driven decisions on marketing efforts and showtime scheduling.	

Skills

Languages: Python, SQL/T-SQL, AQL

Databases: Azure SQL Databases, MySQL, ArangoDB, Azure Data Studio

BI & Analytics: Tableau, Alteryx, Talend, E/R Studio, Azure Data Factory
